Acknowledgements

I wish to express my deep gratitude to my guide Prof. Sunil Kute, Civil Engineering Department, K.K.Wagh Institute of Engineering Education and Research, Nashik for his inspiration, constant encouragement, moral support and timely guidance throughout this work. All the way, he raised insightful questions with respect to the results and the process of obtaining them. He made practical suggestions and showed a close interest in the work. His contribution to this work is invaluable.

I am also thankful to Dr. K. N. Nandurkar, Principal K.K.Wagh Institute of Engineering Education and Research Nashik for his kindness and moral support. I thank for all support and assistance provided by a team of talented and dedicated technical and supporting staff and other teachers of Civil Engineering Department.

Special thanks to Dr. S.V. Deodhar, Dr. R. K. Jain, Dr. A. K. Dwivedi, Dr. P.D. Jadhao and Dr. Hitendra B. Patil for their timely co-operation, guidance and encouragement.

The last, but by no means least, word of appreciation must be reserved for my cherished wife, Tanuja, our dear sons Ravish and Ritik. Although, they will no doubt have many precious memories of our Nashik experiences, the last four years have not always been buoyant for them. They often have had to make do with a preoccupied husband and papa, with many a reminder of the high opportunity cost incurred in allowing me to embark on this journey. Thankfully they have pretty much weathered the challenge. If there was any credit due to this work, it would be as much theirs as mine.
