List of Tables

2.1 Percentage ratio of vessel bifurcations matched to vessel bifurcations detected for DRIVE and STARE databases ........................................ 39
2.2 Percentage ratio of vessel bifurcations matched to vessel bifurcations detected for VARIA and Local hospital database ......................... 40
2.3 Percentage absolute error in estimation of registration parameters (rotation, translation and scale) for DRIVE database .......................... 41
2.4 Percentage absolute error in estimation of registration parameters (rotation, translation and scale) for STARE database ......................... 42
2.5 Registration accuracy in pixels for different databases ....................... 43
2.6 Performance of registration algorithm in terms of average standard deviation in pixels considering reduced number of control points .......... 45
3.1 Registration accuracy in pixels for different databases ....................... 60
4.1 Vessel Classification ......................................................... 83
4.2 Performance measures for DRIVE database ................................ 84
4.3 Performance measures for STARE database ................................ 85
4.4 Performance measures for hospital database ............................... 86
4.5 Performance comparison with existing unsupervised methods ............ 88
4.6 Performance comparison with other methods based on matched filtering . 88
5.1 Performance measures for DRIVE database ................................ 98
5.2 Performance measures for STARE database ................................ 99
5.3 Performance comparison with other techniques ............................. 99
6.1 Pixel based performance measures for abnormal images .................... 112
6.2 Image based performance measures for evaluating presence of retinopathy . 112
