ACKNOWLEDGEMENT

First of all, all praises be to Lord Ganesh, The Exalted, Most Gracious and Most Merciful.

The past four years were fascinating, illuminating, frustrating, exhausting. This page is for all those who joined me in work and discussion, who lifted my moods when things went wrong and celebrated with me the good times. For all those who made this work possible. Thanks.

I express my profound sense of gratitude to my respected supervisor, Principal Dr. Shivaji N. Thore Vinyakrao Patil Mahavidyala, Vaijapur for his inspiration, constant guidance, valuable suggestions, unparalleled encouragement and support made throughout the course of my study. He always provided an endless source of ideas and motivation. He has allowed me the freedom to develop my own areas of interest within the scope of this project, and made the research more enjoyable rather than daunting. It is my privilege to thank Dr. C. H. Gill, Head, Department of Chemistry and Dr. M. S. Shingare for their constant encouragement and ardent interest shown during the progress of the work.

I sincerely acknowledge Dr. Mahesh Patel, Director, Wockhardt Research Centre, Aurangabad. I owe tremendous debt to Dr. Vijay J. Patil and Dr. P. K. Deshpande for introducing me to the fascinating field of research. I am also thankful to Dr. Satish Bhavsar, Dr Shivaji Pawar, Dr. Santosh Diwakar, Dr. Rajesh Bora, Dr. Rajkumar Hangarge, Dr. Mohammad Shaikh, Sanjay Dabhade, Rajesh Kale, Sunil Gupta, Vipul Rane and Nagannath Kokare. I will always treasure the friendship and times of discussion, laughter, crisis, enthusiasm and positive attitude towards science which brought us together as a group.

The work would not have been completed without the help rendered by the biology and analytical groups. My sincere thanks to Dr. C. R. Patil and his crew at R. C. Patel College of Pharmacy, Shirpur for carrying out the pharmacological evaluation of the synthesized compounds. I also thank Dr. K. G. Baheti Chavan College of Pharmacy, Aurangabad for carrying out pharmacological evaluation of the synthesized compounds.
I am deeply grateful to my beloved parents, who has contributed and sacrificed a lot for me to accomplish this stage and will always remain a sole source of inspiration in my life to achieve higher goals, for their prayers, love and support without whose good wishes I could not have completed this work. I will always miss my father, as he was a constant source of encouragement and my mentor through good and bad times of life. May god bless his soul with serenity.

Words are not enough to express my deepest admiration to my spouse Sonali, for all the sacrifice she has made regarding my entire program. But for her trust and belief in me and above all, encouragement and understanding, it would have been difficult if not impossible, to undertake the program successfully. My love also goes to my son Dhruv for giving me pleasure and fun in spare time.

Many regards to my sisters and every member of my family for their constant support and blessings.

Deepak Dekhane
