List of Tables

Table 3.1 Lattice parameters of wurtzite ZnO.................................................................67

Table 4.1. Selected bond distances in pure and metal-decorated BDC linker calculated by
MP2/6-311G* and GGA-PBE/plane wave methods. All bond distances are in Å and
charges in atomic units.(See Fig. 4.1 for labeling of C atoms)........................................86

Table 4.2. Selected structural parameters of the primitive unit cell of MOF-5 calculated
in this work by the GGA-PBE/plane wave method, in a previous theoretical study [17]
and obtained from experiment [71]. The ratio of our theoretical values with respect to the
experimental results for each parameter is also listed. The values in ( ) and { } are the
average C-C bond distances in the BDC linker obtained from GGA-PBE and MP2/6-311+G* methods, respectively.................................................................88

Table 4.3. Optimized structural parameters of MOF-5:M2 (all M) and MOF-5:M2:nH2 (M
= Li, Al) primitive unit cells obtained using the GGA-PBE/plane wave method. The
labeling of C atoms is the same as in Fig. 4.1. The values in ( ) are the average bond
distances. All bond distances are in Å........................................................................90

Table 4.4. Calculated atomic charge of metal atom M in BDC:M2 (MP2/6-311G* method) and in MOF-5:M2 systems (GGA-PBE/plane wave method) and calculated and
interaction energies (ΔE) in MOF-5:M2 systems............................................................91

Table 4. 5. Calculated total H2 binding energies and binding energies per H2 of MOF-
5:Li2:nH2 and MOF-5:Al2:nH2 systems and previously reported theoretical binding
energies [53] per H2 of MOF-5:Li2:nH2. All energies are in kJ/mol...............................97

Table 5.1. Binding energies (in kJ/mol) and Bader charges on metals atoms of M-nH2
systems.........................................................................................................................110
Table 5.2. Structural parameters of MOF-5, MOF-M$_2$, MOF:M$_2$:nH$_2$, MOF:2B, MOF:2B:Sc$_2$ and MOF:2B:Sc$_2$:nH$_2$ systems. Values given in ( ) are corresponds to fifth hydrogen per metal. M-BZ$_{COM}$ is the distance of metal atom from benzene of MOF-5……..113

Table 5.3. Binding energies of MOF:M$_2$:nH$_2$ and MOF:2B:Sc$_2$:nH$_2$ systems ..........118

Table 5.4 Lattice parameters of ZIF-72.................................................................125

Table 5.5. Geometrical parameters of metal (Co, Cu, Cr, Fe and Zn) based ZIF ……126

Table 6.1. Interaction energies of model systems with metals..............................138

Table 6.2. NICS values of different model systems and their metal decorated counter parts..........................................................140

Table 6.3. EA and IP values of benzene substituted model systems......................140

Table 6.4. Binding energies of BZ:Sc$_2$:nH$_2$ systems.............................................141
