List of Tables

Table 3.1 Frequent pattern generated from FP-tree of Figure 3.5 (b)
Table 3.2 Sample database
Table 3.3 Calculation of frequent itemsets
Table 5.1(a) Parameters values
Table 5.1(b) Data sets used
Table 5.2 Results produced by the proposed approach for different dataset
Table 5.3 Effect of varying the minimum support threshold on the time consumed
Table 5.4 Effect of variation in values of \( \alpha \) and \( \beta \) with Chess dataset
Table 5.5 Total number of itemsets produced using proposed ACO based approach
Table 5.6 Comparison of the proposed approach with Apriori approach in terms of execution time
Table 5.7 Number of itemsets produced from different datasets
Table 5.8 Parameters values
Table 5.9 Data sets used
Table 5.10 Association rules generated for Contact Lenses dataset
Table 5.11 Association rules generated for Super Market dataset
Table 5.12 Comparison of the proposed approach with Apriori approach in terms of execution time
Table 5.13 Number of rules produced from different datasets
