ACKNOWLEDGEMENT

I express my deep appreciation and sincere thanks to all colleagues, friends and associates who provided me with their whole-hearted and unstinted cooperation and support right throughout the course of this study.

I would like to make special mention of the guidance extended to me by my supervisor Dr. Seema Puri. Her supervision, advice, guidance and whole-hearted encouragement and support kept inspiring me to grow as both student and researcher. I thank her for providing the backbone for my thesis.

I am also thankful to Dr. Kumud Khanna (Director, Institute of Home Economics) and Dr. Minnie Mathew (World Food Programme, New Delhi) for helping me tide over the rough times of confusion and for providing me with right directions for completion of my study. Dr. Khanna’s rich experience and innovativeness nourished my intellectual faculty. I would like to put on record my special mention of Mrs. J. Das Gupta and Ms. Kalayawani who helped me with their professional expertise in statistical analysis.

I am also grateful to the United Grants Commission for providing me with financial assistance in the form of Scholarship, which helped me undertake field visits and in meeting the other operational costs of the study. The support provided by UGC helped me to successfully complete my research work within the stipulated timeframe. I also wish to acknowledge the support provided to me by the World Food Programme, New Delhi that helped me visit the “unreached” districts in Orissa as part of my study.

The doctors and staff of GTB Medical College, New Delhi, MKCG Medical College, Behrampur, Orissa and VSS Medical College, Sambalpur, Orissa deserve my special mention for their cooperation and guidance. Without their help, I could not have interacted successfully with the subjects of my study. Special thanks are also due to Mr. Sudhakar for helping me understand the Oriya language; it really went a long way in enabling me to converse with my subjects in their language.

I deeply appreciate the constant support of the faculty and staff members of the Department of Foods and Nutrition, Institute of Home Economics, University of Delhi. I also extend my sincere thanks to all the subjects and their families for participating and contributing to the successful completion of my study. Without their contribution, this would not have been possible.

Where would I be without my family? My parents deserve a special mention for their unconditional and unending support, inspiration, love and prayers. My father, RS Pahwa and
my mother, Kuldeep Pahwa are my pillars and I thank them for raising, caring, loving and nurturing the intellectual seed in me. It is because of their constant encouragement and endless sacrifices that I was able to study in the best possible environment and with best possible resources. Randeep Pahwa, my brother, stood by me during thick and thin and supported me in living my dream. My extended family in USA – the ‘Sanders’ – ignited the spark in me and led me to pursue the doctorate – I thank them for being there for me.

Thanks is a small word to express my appreciation for my husband, Gagan Anand whose undiluted dedication, love and confidence in me took the load off my shoulders. I also thank Arun Anand and Ravi Kiran Anand, my new parents, who never discouraged me from chasing my dreams and provided me with their unconditional support to complete my studies without worrying about my family responsibilities. I also must thank Kanika Anand for being a big source of support and encouragement. And, of course, how can I forget to mention Vihaan, my son, whose boundless love and enthusiasm inspired me in their own unimitable ways!

Finally, I would like to thank everybody who played a part, no matter how small, in the successful culmination of my work in the form of this thesis.

Deepika Pahwa
