LIST OF TABLES

Table 3-1: Pharmacology of clinically used ACEIs ................................................................. 63
Table 3-2: Pharmacokinetic features of ARBs ......................................................................... 67
Table 5-1: Effect of ACEIs on the exploratory behaviour of rats in scopolamine induced amnesic rats during passive avoidance test ................................................................................. 97
Table 5-2: Effect of ARBs on the exploratory behaviour of rats in scopolamine induced amnesic rats during passive avoidance test ................................................................................. 98
Table 5-3: Effects of ACEIs and ARBs on scopolamine-induced amnesic rats during the retention trial (24 hours after the aversive stimulus) .................................................................................. 103
Table 5-4: Effect of ACEIs and ARBs on scopolamine-induced amnesic rats in EPM test .......... 108
Table 5-5: Effects of ACEIs and ARBs during acquisition trials on Day 1 and Day 4 in MWM test 116
Table 5-6: Effects of ACEIs and ARBs in the probe trial on Day 5 of Morris Water maze test ...... 123
Table 5-7: Effects of ACEIs and ARBs on MDA level of rat hippocampus in scopolamine-induced amnesic rats .................................................................................................................. 128
Table 5-8: Effects of ACEIs and ARBs on hippocampal antioxidants activity in scopolamine-induced amnesic rats .................................................................................................................. 136
Table 5-9: Effect of ACEIs and ARBs on ChAT and AChE activity in the hippocampus of scopolamine-induced amnesic rats .................................................................................................................. 141
Table 5-10: Number of healthy neurons at CA3, CA1 and dentate gyrus regions in the hippocampus of scopolamine-treated amnesic rats following treatment with ACEIs and ARBs .......... 154
