I take pleasure in writing these few lines, expressing my sense of gratitude to Prof. D. S. Kothari, Head of the Physics Department, Delhi University, Honorary Adviser to the Ministry of Defence, Government of India, for his providing opportunities, circumstances, and freedom to carry on this work. Without his material and moral help this would not have been possible. His gentle and kind words, spoken during my though occasional, yet so intimate meetings with him, instilled in me a spirit of encouragement which helped me to master those moments of 'distress' in research. I imbibed by my contacts with him, through some mysterious and undefinable 'osmosis' that sense of discrimination, enabling me to appreciate the difference between the essential and the non-essential, the relevant and the irrelevant, the trivial and the important, and thus to formulate a problem with confidence. Being deeply impressed by his absolute way of looking at things, arising out of an innate honest sincerity, and objective attitude towards life, I acquired from him that habit of thinking scientifically - a positive asset in developing a scientific bent of mind.
