List of Figures

1.1 Relation between epidemiological epochs .............................................. 13

2.1 Variations in the susceptibles for different initial infectives .................. 43
2.2 Variations in the infectives for different initial infectives ..................... 44
2.3 Variations in the immunized individuals for different initial infectives ...... 45
2.4 Variations in the removals for different initial infectives ....................... 46
2.5 Effect of changing infection rate on susceptibles ..................................... 47
2.6 Effect of changing infection rate on infectives ....................................... 48
2.7 Effect of changing infection rate on immunized individuals ..................... 49
2.8 Effect of changing infection rate on removals ....................................... 50
2.9 Effect of changing immunization rate on susceptibles ............................. 51
2.10 Effect of changing immunization rate on infectives .............................. 52
2.11 Effect of changing immunization rate on immunized individuals ............. 53
2.12 Effect of changing immunization rate on removals .............................. 54
5.1 Representation of equation 5.8, when \( R_0 < 1 \) .............................................. 100

5.2 Representation of equation 5.8, when \( R_0 > 1 \) .............................................. 101

5.3 Mean number of AIDS cases of the model versus reported Indian AIDS cases: for the estimated parameters \( \lambda_1 = 17905 \), \( \lambda_2 = 2 \) and \( \lambda_3 = 0.11765 \) 122
